Key Notes

- **Waves 7 and 9** (contact locations + story articles = ~125 pages) are templated and ideal for **bulk/batch import**, which dramatically accelerates migration.
- **Wave 1** is the most labor-intensive per page because it establishes all the core block patterns and the design system.
- **Story articles** share a single template, so once one is migrated successfully, the remaining ~109 can be bulk-imported.
- **Scope:** This inventory covers abbvie.com (US domain) only. Regional sites, language variants, Privacy, HS, NIC, and PMIS sites are excluded per the agreed timeline (Phase 2: Months 5–7).
- **External domains excluded:** news.abbvie.com, investors.abbvie.com, careers.abbvie.com, privacy.abbvie, abbviemedinfo.com, abbviecontractmfg.com
